

Step-By-Step Process *of a permanent bracelet*

1

Select the chain you'd like!

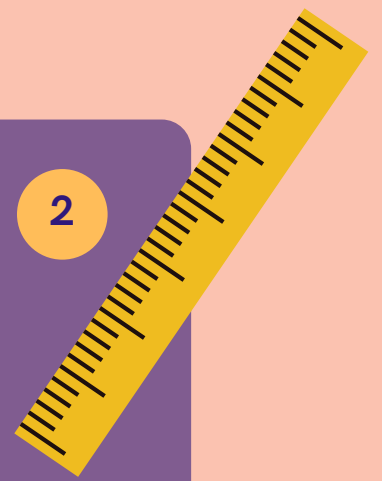

The first step of your appointment is to select the chain you want! Whether it is a gold filled curb chain or a 14k solid gold paperclip chain, there is never a wrong decision! Choose the style for you or add layers with multiple chains!

Measure the chain around your wrist.

Next, we will need to measure the desired length around your wrist! Our jeweler will usually recommend placing a finger under the bracelet to leave a comfortable gap for mobility for your new bracelet.

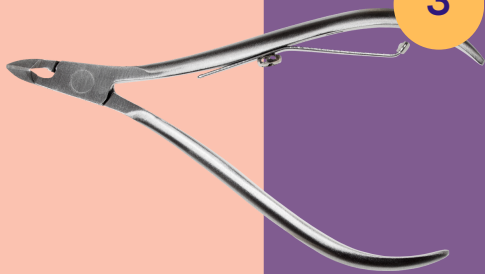

2

3

Cut one link and attach it.

Now, our jeweler will cut one link of the chain and place the uncut onto it, getting it prepped for welding! We are ready to go!

Weld the cut link.

Place your arm comfortably on the table where the welding device is. The welding only takes a few minutes until it is complete. You will feel a slight puff of air and hear a small zap but don't worry, it's nothing to be worried about!

4

5

Clean and polish the welding point.

Once the weld is complete, the jeweler will then grab a micro brush and start to brush off any charred material and then polishing it, leaving a beautiful, shimmering and seamless bracelet!

Show off your new bracelet!

Now it's time for you to show off your new permanent bracelet! style it any way you'd like and whenever you feel like it's time to take it off, simply use any household scissors to snip it off!
